

MORPHOLOGY-MATCHED-FORWARD-READOUT-GATE

A. Residual-blind source layer

B. Forward readout construction

leakage guard: endpoint residuals, required S_T , and post-hoc family switching are forbidden inputs

blocked feedback path

score only
after freeze

C. Endpoint scoring and controls

**pass evidence: matched family beats wrong families and shuffled labels
baseline comparison is reported separately**

Claim boundary: a positive gate supports morphology-specific forward-readout information; it does not by itself validate a full gravity theory.
